EDUCATION

University of Toronto Mississauga

Expected May 2028

Bachelor of Science (B.S.) in Mathematics — Statistics Specialist, Minor in Computer Science Mississauga, ON

EXPERIENCE

Data Science and AI Intern

GTech

June 2026 – June 30, 2026

Istanbul, Türkiye (Hybrid)

- Performed data analysis using Python libraries to support internal tooling
- Optimized the company's local chatbot, lowering response time by 11% and increasing accuracy from 63.6% to 98.4%
- Tested workflow automation tools such as n8n for the chatbot's RAG system
- Gained hands-on experience working with MongoDB

Executive

Turkish Students Association Canada

October 2025 – Present

Toronto, ON (Remote)

PROJECTS

Health Signal | Agentic AI, Python

GenAI Genesis 2026 — Canada's largest AI hackathon

March 2026

- Built a preventive health monitoring system powered by agentic AI as part of a 4-person team
- Tracked 9 health indicators simultaneously (activity, sleep, heart rate variability, SpO2, and more) to detect multi-indicator declines across consecutive days
- Built an AI agent to translate flagged health data into plain-English explanations and personalized next steps
- Integrated real pharmacy recommendations, including medicine options, addresses, and prices

Carbon Coach | Python, SQLite

DeerHacks V — University of Toronto Mississauga hackathon

April 2026

- Built an app with a 3-person team to track and report personal carbon emissions from daily meals and trips
- Used Python and SQLite to store and process user activity data via a Python-built API
- Generated end-of-day suggestions to help users reduce their environmental impact

Chess Analysis Tool (Ongoing) | Python, pandas

- Interacting with databases and machine learning models to analyze chess games
- Using the Python pandas library to process real-world chess data

Phone Call Tracker | Python

- Applied data structures to track and analyze real-world phone call data
- Designed the underlying data contract/schema

Python Compression/Decompression Tool | Python

- Implemented the Huffman Tree algorithm for efficient compression and decompression
- Handled bit-to-byte conversion using the Huffman Tree library in Python

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, R, HTML5

Tools & Platforms: MongoDB, SQLite, n8n, Git, Java

Areas: Data Science, Machine Learning, Mobile App Development, RAG Systems, pandas

CERTIFICATIONS

- Machine Learning and AI with Python — edX Verified Certificate
- Python Basics for Data Science — edX Verified Certificate
- R Programming Basics for Data Science — edX Verified Certificate
- Data Science with R — IBM
- Introduction to SQL — IBM
